Question	Answer	Marks	Guidance
1(a)	$s^2 = \frac{1}{9} \left('71314' - \frac{'844'^2}{10} \right) \quad \left[= \frac{134}{15} = 8.933 \right]$	M1	Correct expression, implied by AWRT 8.93.
	2.262	B1	2.262 or 2.26 seen.
	$\frac{'844'}{10} \pm '2.262' \sqrt{\frac{'8.933'}{10}}$	M1	Correct form, must be a <i>t</i> -value.
	[82.3, 86.5]	A1	Accept with inequality signs or open brackets. Condone [86.5, 82.3]. Do not accept 84.4 ± 2.1 .
	The distribution of estimates of angles is normal. OR The estimates are a random sample from some population. OR The estimates are independent. OR Underlying distribution is normal.	B1	
		5	
1(b)	Population unlikely to be normal as θ is close to right-angle / data is skewed. OR Estimates may not be independent, for example due to collusion. OR No indication that sample is random.	B1	Must refer to the context.
