Question	Answer	Marks	Guidance
3	$\Sigma(x - \bar{x})^2 = 9 \times 0.36 = 3.24$	B1	
	$'55.8' - \frac{'16.6'^2}{5}$	M1	Can be implied by $0.172 \left(= \frac{43}{250} \right)$ or $0.688 \left(= \frac{86}{125} \right)$.
	$\frac{3.24 + 0.688}{10 + 5 - 2} (= 0.302)$	M1	Correct use of formula for pooled variance using <i>their</i> values.
	$s = 0.550$	A1	CAO

Question	Answer	Marks	Guidance
4	$\frac{1}{4} \times 28 \times (28 + 1) \quad [= 203]$ $\frac{1}{24} \times 28 \times (28 + 1) \times (56 + 1) \quad [= 1928.5]$	B1	Both expressions correct. Implied by 203 and 1928.5 seen.
	$[z =] \frac{T + 0.5 - '203'}{\sqrt{'1928.5'}}$	M1	Correct form or expression for CI with any z -value. Condone T or $T - 0.5$ instead of $T + 0.5$ for M1.
	$\frac{T + 0.5 - '203'}{\sqrt{'1928.5'}} > -2.576$	M1	Compares <i>their</i> z with ± 2.576 . Condone T or $T - 0.5$ instead of $T + 0.5$ for M1.
	$T > 89.4$	A1	Allow $T = 89.4$.
	$T = 90$	A1	All correct with no errors seen, including correct continuity correction.
